Global Superstore Business Performance Analysis

Analysis of 51,290 orders across 7 global markets (2011-2014).

Key findings:

- Overall profit margin of 11.6% across $12.6M in sales, but performance varies significantly by market and discount strategy.
- Discount policy is the primary driver of profitability: undiscounted orders generate 25.3% margin, where orders discounted at 50%+ generate -111% margin.
- 20% of all orders carry discounts above 30%, collectively generating $793k in losses.
- Tables (Furniture) is the only loss-making sub-category at -8.46% margin, driven by a 29% average discount rate.
- EMEA has the highest average discount (19.6%) and the worst margin (5.45%), confirming discount policy as the root cause.
